Newborn survival by STAT category

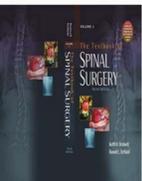

Internal data from July 2016 through June 2020 compared to STS data July 2015 through June 2019; new STS data are not yet available

Sydney HEMS Algorithm

Sherrin et al. (2013). Algorithm for the resuscitation of traumatic cardiac arrest patients in a physician-staffed helicopter emergency medical service. *Critical Care*, 17(308).

Surgical Management of Epidurals

Indications for Surgery

- An epidural over 30 cm³ should be removed regardless of the GCS score.
- An epidural less than 30 cm³ and with less than a 15-mm thickness and with less than a 5-mm midline shift and with a GCS score greater than 8 without focal deficit can be managed nonoperatively but need serial scans and close follow-up.

Timing

- Patients with an acute epidural in coma with anisocoria need surgery immediately.

Methods

- Craniotomy.

Exceptions

- Venous epidurals.
